

Graduate Vacancy

A local software development company with a national customer base is seeking graduates to join its software development support team.

Topaz Computer Systems has been creating financial and commercial software solutions since its creation in 1989. In recent years, Topaz has undergone a period of sustained expansion and now has 32 people in the team. The software, which encompasses Financial Accounting, Order Processing, Supply Chain Management, Payroll, HR and Time and Attendance systems, is in use in a wide variety of sectors from food ingredients through general manufacturing and distribution, to education.

You will be fully trained to undertake software development and support using our chosen 4GL Rapid Application Development environment and your career path will progress as you gain knowledge of the different software solutions we produce and the different customers who use them.

Whilst it is probable that the successful applicant will have a degree in an IT subject, it may well be that a business qualification is just as suitable as much of the software has a financial flavour. What you do need is a strong aptitude for software design coupled with a flexible approach and a willingness to learn and develop from your experiences.

You will be based at our offices near Nottingham where we offer a friendly and supportive working environment, reflecting the stable and inclusive nature of our business.

In the first instance please send your CV by post to:
